

Surfaced plywoods

Finnforest's basic plywoods can be further processed using different types of surfacing films. The properties of the panels' surface can be improved or the pattern on the panel surface altered, depending on the intended application. The surfacing technology used in our factories represents the highest quality in the field. The latest innovations are always available to us. Our surfaced plywoods come in a range of different forms: smooth, rough, patterned ...

Finnforest Form plywood

is a birch, combi or spruce plywood in which both sides are covered with phenol film with sealed edges. Finnforest Form plywood is the formwork panel of choice for smooth-surfaced concrete elements. It can also be used as a multi-purpose, maintenance-free sheathing panel for the transportation vehicle industry and for the agricultural sector.

Finnforest Deck plywood

is a phenol film-surfaced plywood, in which a rough wire mesh pattern has been imprinted during the coating phase. The rough surface of Finnforest Deck plywood makes it a highly durable, multi-purpose floor panel.

Finnforest Plex plywood

is an economical choice for applications involving formwork and is also ideal for use as a vehicle floor panel. Finnforest Plex is available in unsurfaced form as well as surfaced with a smooth or mesh wire patterned phenolic film.

Finnforest Mel plywood

is a birch plywood which has a white melamine surface film and whose edges have been sealed. Finnforest Mel plywood is maintenance-free with multiple applications. It is suitable for use in the construction and transportation industries as well as for hoardings and signs.

Finnforest Floor plywood

is a birch or combi plywood in which the surface has been treated with a mesh wire patterned, multi-coat surfacing film. The rough surface of the Finnforest Floor plywood makes it a highly durable floor panel. Finnforest Floor plywood is suitable for applications requiring a secure, long-lasting friction surface.

Finnforest Top plywood

is a birch or combi plywood in which the surface has been overlaid with a multi-coat surfacing film. During the surfacing phase, the plywood panel's wearing surface has been imprinted with a raised pattern. Finnforest Top plywood is suitable for use as a floor panel in the transportation industry and other demanding applications.

Finnforest Diamond plywood

is a birch or combi plywood in which the surface has a diamond patterned, multi-coat film. During the surfacing phase, the plywood panel's wearing surface has been imprinted with a raised pattern. Finnforest Diamond plywood is suitable for use as a floor panel in the transportation industry and other demanding applications.

Finnforest Laser plywood

is a birch plywood product coated with a special transparent film. Finnforest Laser plywood is primarily intended for applications where laser cutting is required, such as manufacture of toys and die-boards for the packaging industry.

Finnforest SP plywood

is a birch or combi plywood coated with a weather-proof painting base whose edges have been sealed. Finnforest SP plywood is a product that offers its user a reliable, crack-resistant painting base suitable for both indoor and outdoor use.
