

**MasterPlank LVL**  
Strength for long spans  
Superior performance

**Master-Plank® LVL** is made of eco-friendly, forest-certified Nordic Spruce and Pine. Its superior strength and quality, consistent uniformity and light weight make Master-Plank® LVL the #1 choice for many uses.

Master Plank® LVL is stronger, straighter, lighter and more stable than sawn timber. It is ideal for beams and headers, mobile/modular applications, scaffold planking, truss chord material and more.

Master Plank® LVL veneer grain runs longitudinally through all the layers, making it ideal for long spans. The product excels for industrial applications because of its dimensional stability and consistent quality.

Excellent workability, appearance and finishing characteristics combine ease of use with superior technical performance. Master Plank® LVL also offers good acoustical performance and fire resistance.

Master Plank® LVL has all U.S. building code approvals, including NER-555. Specification guides are available via download or on CD.  
Dimensions:  
Lengths: 8' - 60',  
Thickness: 3/4" - 3 1/2"  
Width: 3 5/8" - 24"
